SYSTEM SW

SEP2W

for Meter Data Management

SYSTEM SW

SEP2W
for Meter Data Management

■ Benefits

Configure your package and minimize costs

The modular design of SEP2W allows you to customize your system by using only the modules you truly require and minimizes system expansion costs. A flexible licensing model is designed to support your needs – additional licenses can be added at any time, as needed.

A solution supporting your growth

The reliable and scalable platform provides you with a solution not only fitting your current needs, but also the needs that may arise in the future due to system expansion, changes in legislation and/or operational requirements.

Optimize processes with a flexible approach

SEP2W is an extremely flexible solution, whose service-based design fully supports optimization of your business processes throughout the organization.

Seamless integration that generates savings

Use of open standards and technologies ensures effortless integration with existing legacy systems and in turn minimizes your custom development costs.

Take your customer support to a higher level

The system ensures prompt notification of any exception condition detected on the grid, allowing you to dispatch maintenance personnel within seconds of a power outage. Consumer oriented solutions increase customer engagement in energy conservation activities.
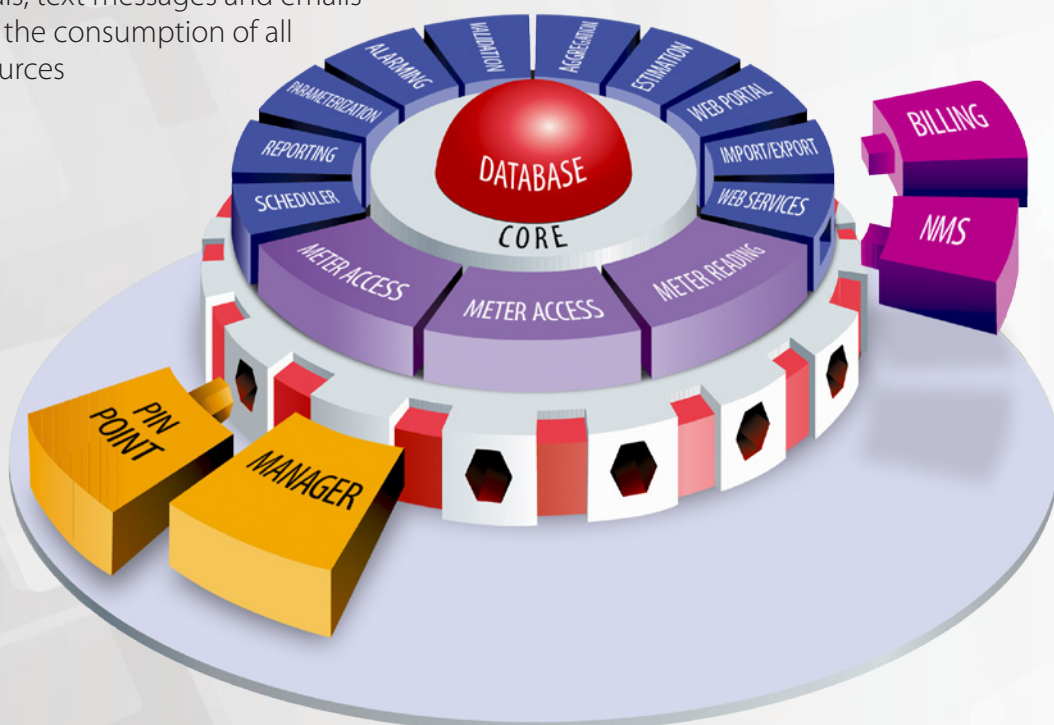

Advantages

- Optimizes resource utilization with automatic load balancing

- Upgrades system features with a simple addition of new functional modules

- Features the Windows look and feel graphical user interface (GUI) with SSO (single sign-on) for easy access by users

- Enables deployment on existing hardware and use of virtualization technology of any choice

- Eliminates the need for dedicated backup solutions - all data is stored in the database so existing backup and restore procedures can be utilized

- No proprietary formats - supports automated file dump based and email data exchange in XML, CSV, XLS, PDF and other formats

- CIM ready and comes with a web services based integration layer

- Enables customer support personnel to perform on-line meter reading and move-in/move out procedures (disconnection/reconnection of power supply)

- Allows easy communication with customers via multiple communication channels, including web portals, text messages and emails regarding the consumption of all energy sources

■ About Iskraemeco

Iskraemeco has been delivering metering solutions since 1945. Our visionary point of view and a touch of curiosity are reflected in our most recent endeavors which include intelligent metering solutions for renewable energy sources, electric vehicles and telecommunication services.

Our products and services, incorporating a sound understanding of our customers' needs provide long-term sustainable solutions. Our strong commitment towards energy efficiency encourages environmentally friendly management of natural resources. Iskraemeco's interoperable products are a timeless solution which enables utilities to fully focus on building a better tomorrow for their clients.

With meters addressing diverse market demands, a variety of communication options, interoperability and comprehensive services we help energy companies shape the future of energy production and management. Our full suite of intelligent products, services and solutions will take you a step further towards a smarter electrical grid.

Iskraemeco QUICK FACTS

- ■ Almost 70 years of know-how and quality
- ■ A broad and rejuvenated product portfolio
- ■ All ISO quality certificates
- ■ More than 2 million smart devices in operation
- ■ Worldwide delivery of future-proof solutions
- ■ A founding member of the IDIS Association
- ■ An established global partner network
